Feedback

- called ThriftFit not ThriftIt

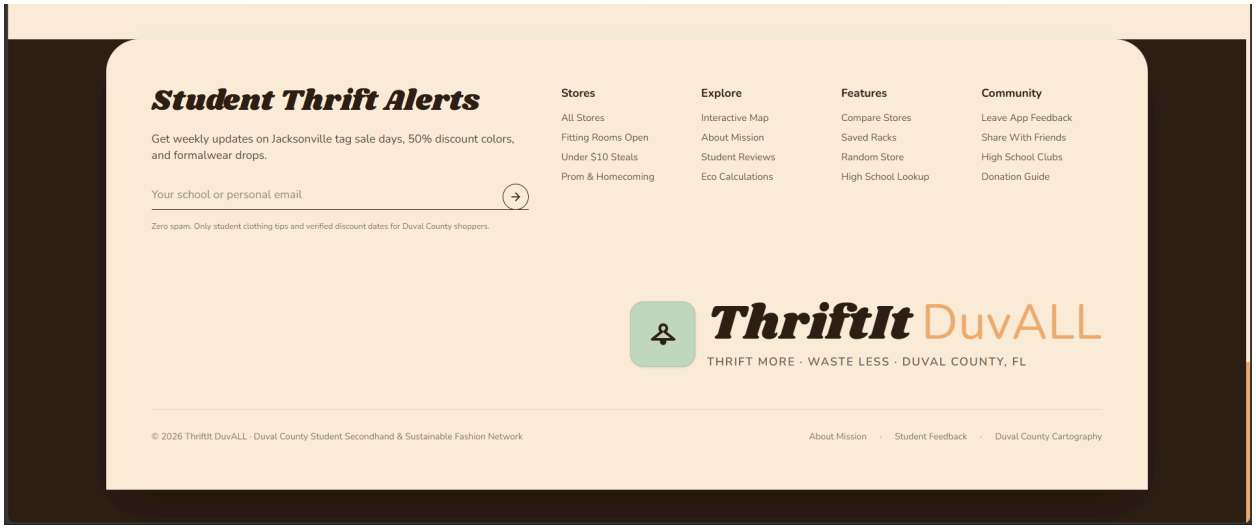

- change exact prices to price ranges

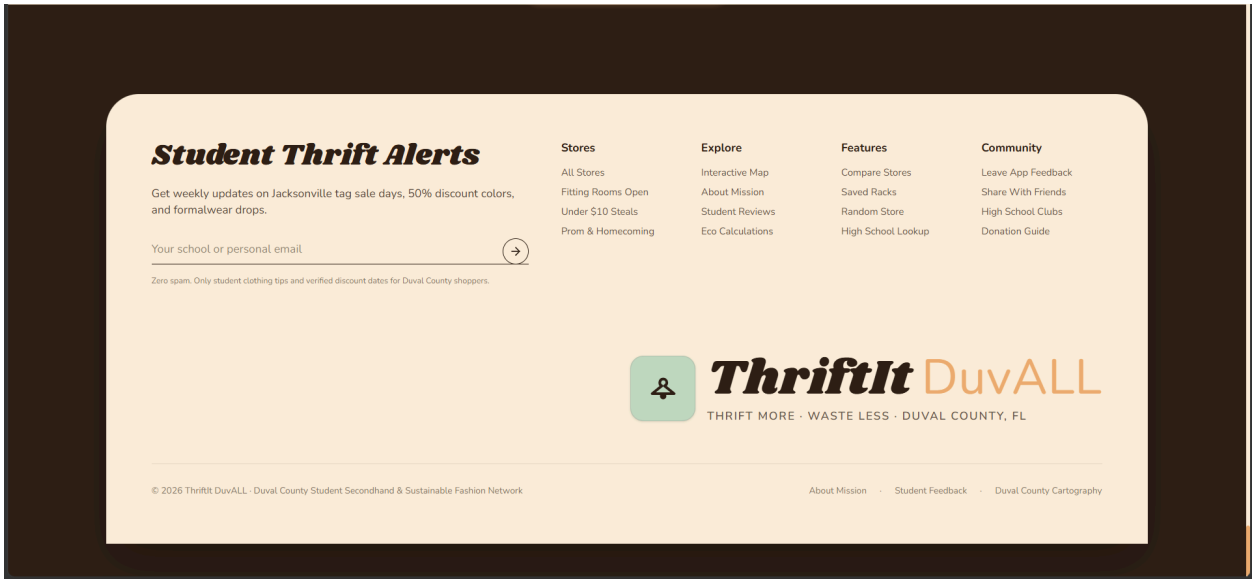

- change the placeholder review names (like the students names) to something dumb like tung tung sahur or tralalelo tralala or some brainrot so the judges don't suspect you're doxxing people

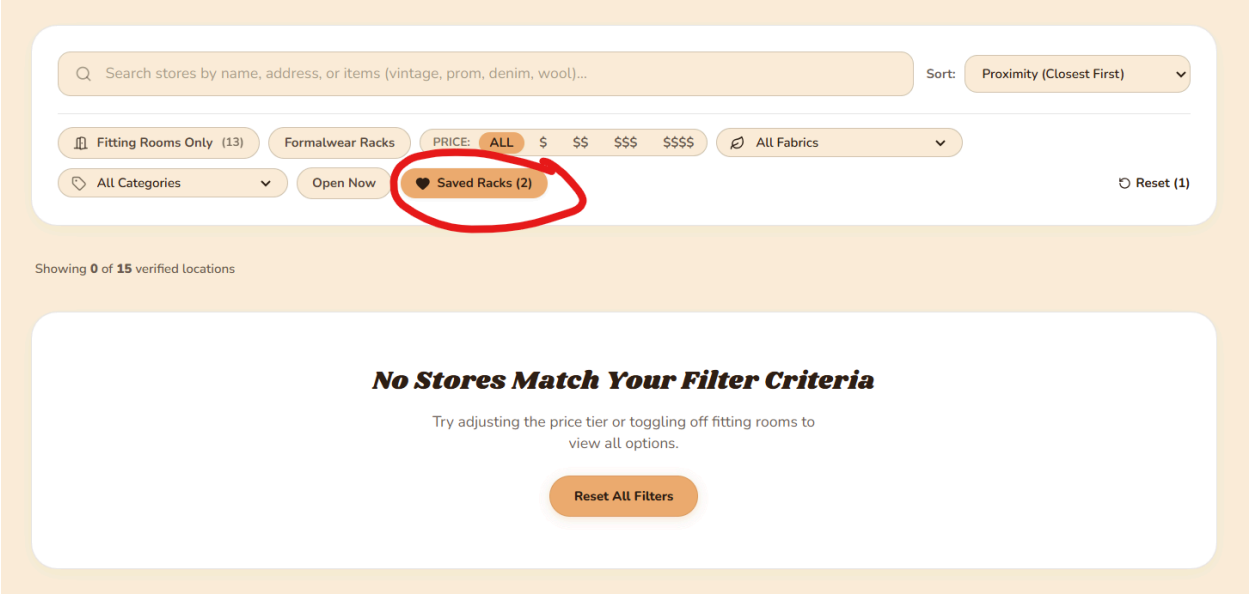

- on some pages the footer looks like this

Obviously this footer looks better so if u could change that

- supposed to be 0

Stuff i was wondering ab

- Phone view?
- Admin portal?

Video

- (only if there is one) Name the:
  - Platform(s) used to build app + scroll thru all the code for like 10 seconds
  - Language(s) the app was coded in + what purposes they serve
  - Platform(s) used to implement maps w/in app + SS
  - Platform/database where the chosen data is stored + SS
  - Platform used to host app + SS
  - Any other things u thought were important in the process code wise
  - ***i'll create a slide for all of these (language, maps, database, hosting, etc.)**
- Talk about a challenge u had, for most points i'd go with talking about maps (like how there was difficulty when coding how the closest stores are calculated from school coordinates) bc acc to the rubric this shows "immense understanding of code"
  - Say:
    - What was hard
    - What u tried
    - How u fixed it
  - *if u don't wanna talk ab maps the next best option is sorting + filtering
